When choosing a technology provider for the intensive supervision of individuals in the community, government agencies want proven systems backed by industry experts. BI Incorporated offers more than a dozen reliable electronic monitoring technologies and services that enable agencies to manage participants more cost-effectively than detention, hold community-based individuals accountable for their time and whereabouts, and offer effective intermediate sanctions for program violators.

**BI ExacuTrack® One** is a single, ankle-mounted active tracking unit that relies on available GPS data and other location monitoring technologies to accurately track an offender’s movement within local communities.

**BI ExacuTrack®** is a hybrid system of proven technologies, including radio frequency electronic monitoring, passive GPS, precise mapping software, and the Internet. Together, these technologies provide a system that reliably and accurately logs an offender’s movement each day.

**SOBERLINK® SL2** is a portable, pocket-sized alcohol monitoring device which detects the presence of alcohol through a deep lung breath sample. Tests include Adaptive Facial Recognition™ to ensure the client is accurately identified. Multiple acquisition technologies determine a GPS location during each test and results are promptly reported to the central monitoring computer system via a cellular connection.

**BI TAD®** combines robust transdermal alcohol monitoring with radio frequency curfew monitoring. By continuously measuring alcohol content in an offender’s sweat, TAD communicates drinking events to the host computer. TAD can distinguish drinking events from false positives with 99% statistical accuracy.

**BI Sobrietor®** is a multi-language alcohol monitoring device which detects the presence of alcohol. Since testing is performed remotely using a telephone connection, compliance with alcohol restrictions can be verified each day.

**BI HomeGuard® 200** delivers a state-of-the-art radio frequency monitoring system that meets agency requirements for flexibility, reliability, and efficiency. Pairing traditional electronic monitoring components and unique service options, HomeGuard can be easily integrated with a variety of monitoring products, or can be used alone as an effective curfew compliance system.

**BI HomeGuard® 206** eliminates the need for a home telephone line and is compatible with other supervision technologies, enabling alternative sanctions to be administered to all individuals in community supervision programs.

BI Monitoring Operations is the 24x7 call center that provides consistent, high quality, uninterrupted monitoring services to our customers and protection of critical offender data. Monitoring Operations offers multiple service levels and includes a substantial backup generator, redundant systems, as well as rigorously trained and certified personnel on all systems and procedures.

BI TotalAccess® is the online software application that officers use to manage data, view participant status, and complete monitoring tasks in real-time. The system can be accessed 24x7 by officers from any web-based computer with Internet access and Internet Explorer 5.5 or higher.

BI GuardServer®, powered by TotalAccess gives agencies complete control over their monitoring data and procedures. With GuardServer, agencies can monitor a hundred or several thousand offenders themselves using the entire suite of BI technology products.

BI VoiceID®, powered by AnyTrax®, uses biometric voice verification technology for ensuring that an individual is located at a particular location at a pre-determined time. Automated inbound and outbound phone calls are made and received from approved locations during the day.

BI Self Report®, powered by AnyTrax®, uses biometric voice verification technology to manage administrative caseloads, lower risk supervision caseloads and pretrial caseloads. Clients report information such as compliance with conditions of release, changes to address or employment status, and more.

BI Incorporated agreement with U.S. Communities allows cities, counties and states access to electronic monitoring products and services at the best price: BI Incorporated, the U.S. leader for electronic monitoring products and services, has entered an exclusive agreement this month with U.S. Communities, a leading national government procurement alliance. The agreement allows city, county and state governmental agencies to contract with BI for its offender monitoring technologies and reentry services at highly competitive prices.

About BI Incorporated: Established in 1978, BI Incorporated is a wholly-owned subsidiary of The GEO Group (NYSE: GEO), a global leader in the delivery of correctional, detention, and residential treatment services to federal, state, and local government agencies. BI provides a full continuum of offender monitoring technologies and community reentry services for parolees, probationers, pretrial defendants and illegal aliens involved in the U.S. immigration court process. BI also owns and operates an ISO-certified national monitoring center, providing 24x7 expert support supervision services exclusively to governmental agencies. BI works closely with corrections officials to cost effectively reduce recidivism, promote public safety, and strengthen the communities they serve.

About U.S. Communities: U.S. Communities was founded in 1996 as a partnership between the Association of School Business Officials, the National Association of Counties, the National Institute of Governmental Purchasing, the National League of Cities and the United States Conference of Mayors. The cooperative delivers world class government procurement resources and solutions to local and state government agencies, school districts (K-12), higher education institutes, and nonprofits looking for the best overall supplier government pricing.
