

Stay prepared with eyewash station service

The CDC estimates that there are more than 2,000 eye injuries in the workplace everyday that require medical treatment.*

*<https://www.cdc.gov/niosh/topics/eye/>

A safe workplace – including regular Eyewash Station service helps you stay prepared... you can even save an eye.

Are you **READY™**?

You're **READY™** for Cintas Eyewash Station Service

Did you know?

ANSI Z358.1-2014 is the standard commonly referred to for eyewash stations. Some points include*:

- Flush both eyes simultaneously
- Have a flush rate of 1.5 liters per minute
- Flush for 15 minutes
- Be hands-free and offer valves with constant flow
- Activate in one second or less
- Be located within 10 seconds of hazard
- Be located within a clear path
- Include a highly visible sign identifying the station

Eyewash station service features:

- On-site service delivered to your business
- A professional dedicated to your business
- Industry-exclusive eyewash unit
- Professional installation
- Program built to help you meet OSHA standards
- Product-specific training
- Combine with your AED, PPE and training services

Get started with a top-tier eyewash station

No eye protection program is complete without an eyewash station. Having a station is a great first step, however, if it isn't serviced consistently it can become obsolete or even harmful.

The Safety Director eyewash station:

- Activates in less than one second
- Contains over 15 minutes of fluid
- Delivers over 1.5 liters per minute
- Made from highly visible green material
- Can be wall-mounted or freestanding
- Accessories available on request

Eyewash stations can often go unused and unnoticed until disaster strikes. Let Cintas help keep them Ready™.

With routine eyewash service and maintenance, you don't have to worry about your stations being prepared to respond in an emergency. From gravity-fed to secondary stations, Cintas has the products you need to stay **Ready for the Workday®**.

Types of eyewash stations*:

- **Portable Primary Units:** these units are very popular in the industrial market and are also referred to as, '15 minute' stations because they flow water for an uninterrupted 15 minutes. These are often placed next to hazards with high potential for eye injury (e.g. forklift stations, machinery, tooling equipment).
- **Supplemental Stations:** these units commonly come in bottle form in a variety of sizes and are typically meant for one-time use. These are often placed next to hazards with a reasonable potential for eye injury (copiers, paint-mixers, janitorial closets).
- **Plumbed Units:** these units are built directly into a building's water source. Plumbed units are the most popular type on the market but do require weekly inspections as well as temperature and pressure checks.

*Note: It is ultimately the responsibility of each employer to determine the proper eyewash unit and placement as well as assess whether they meet the standards applicable to their business.

We deliver.
We stock.
We maintain.
We train.

Your service includes:
